IN THE ABSTRACT

Please replace the present abstract with the following:

ABSTRACT OF THE DISCLOSURE

~~A method and system to allocate computing tasks in a distributed computing environment.~~ The preferred embodiments of ~~this system~~ would enable a client to distribute its computing tasks to a suitable fulfillment server that has all the required client attributes, computing task attributes, and server attributes. This ~~The invention~~ enables distribution of a computing task according to various attributes of a user, a server, and a the computing task. The system is scalable as additional sets of distributor servers can be added to manage the fulfillment servers. In addition, new distributor servers can be added to manage pre-existing distributor servers. Also, the distributor servers can be programmed to consider various attributes according to the usage of the system. In an alternative embodiment, the system can be used to parse a highly intense computing task into components and distribute said components to fulfillment servers that have idle computing power.
